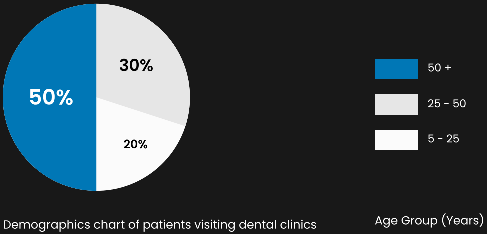
Overview

Urban Dental is a clinical management tool that leverages the power of digital to offer a convenient, customizable, completely functional solution to operate smoothly dental clinics and their dentists.

By the research, clear idea of the demographics is estimated that 50% of the patients are 50 years old and over, children represent about 20%, the rest (30%) are 25 to early 50's years of age.



Demographics chart of patients visiting dental clinics

The Problem

Running a dental clinic means juggling appointments, patient records and payments, much of it on paper. For patients, booking a visit takes time and energy when they are already in pain.

Solution

Create a tool that gives dentists their appointments, availability and patient records in one place, and lets patients book a visit without having to call and receive timely reminders.

Some Common Problem Statement

Not everybody knows who we are, they just don’t believe we are allowed to do this under professional supervision.
- Dental Co-Assistant

It’ll be easier if we have the patient profile, their complaint, or proof-like photo of their mouth.
- Dental Co-Assistant

The worst thing when you don’t have any patient to check on, you literally need to walk to a neighborhood and knock on their door.
- Dental Co-Assistant

It would be nice if I know the complete professional profile of the Co-assistant, I don’t want to be fooled.
- Patient

It’s hard to suit my schedule with theirs.
- Patient

I don’t know much about the hospital and their program, maybe if you could give us more information about these kids that want to treated toothache for free it should draw more attention.
- Patient

Competitive Analysis

At this step, understand the services and features provided by different competitors around the globe. In the first phase, I did secondary research, such as looking for each websites and their users reviews. I found the information, motivation, and problems that users often experience while using these services.

List of Competitor

Competitor List	Overview	Active Since	Services
curve DENTAL Website	Curve SuperHero practice management software makes everything easy. It's goal is to deliver cloud-based software that makes it easy to manage a dental practice.	2004	• Implementation • Data Conversion • Data Management • Training • Support
practice-web Helping Dentists Thrive! Website	Practice-Web is a comprehensive practice management solution designed for today's modern dentist.	1988	• Comprehensive Practice Management • Tutorials and Webinars • Free Demo • Training & Support
DENTRIX ASCEND Website	Dentrix Ascend includes a predictive problem-solving feature called Goals, Problems and Solutions (GPS). This unique business tool identifies tasks that need attention and provides solutions to keep your practice on course.	2014	• Multisites • Practice Management • Front Desk • Clinical
dovetail .co Website	Dovetail is the world's only truly mobile, easy to use Dental Practice management software that will actually save you money. Dovetail offers a mobile EHR web-application that is certified by the ONC and is HIPAA compliant.	2010	• Front desk & Practice Management • Clinical & EHR • Patient Engagement • Business Management & Analytics
planet DDS Website	Denticon was the first cloud-based dental office management software. It is a reliable program suitable for practices of all sizes. Denticon dashboards are designed to be intuitive so smaller teams can achieve more through easy user interfacing and useful reports.	2003	• Modern Clinical Experience • Easy-to-use Scheduling • Efficient Back & Front Office Operations • Online Patient Tools • Insightful Analytics • Native Patient Communications • Multi-Specialty Capabilities • Enterprise Management • Advanced Security

SWOT Analysis

SWOT Analysis

Competitor List	Strengths	Weaknesses	Opportunities	Threats
curve DENTAL	• Cloud-based all in one practice management solution • Brilliantly designed user interface	• There is no electronic signature availability for the patient file • No option for CBCT backup	• Over 41,000 dental professionals in the United States and Canada	• Poor billing and transaction system
practice-web Helping Dentists Thrive!	• Oldest service provider in industry • They provide database conversion for clinic management	• Lack of "cloud" support. • The integration process was tricky, and a bit complex.	• It provides pay-by-text feature • It's teledentistry feature differs it from others	• Only compatible with the Microsoft.NET platform

DENTRIX ASCEND	• The cloud based service and always evolving with updates impress users as they improve the product as per recommendations	• Users find its ledger quite confusing • Its insurance setup is user-unfriendly • Inability to edit procedure codes	• Its multisites service makes the product outstanding to save money and time • Keep track of multiple clinics	• While being next generation technology and cloud based it has been very slow to publish APIs
dovetail .co	• World's only truly mobile Dental Practice management software • Less expensive than similar products	• Insurance claims are not fully operational	• offers a mobile EHR web-application that is certified by the ONC and is HIPAA compliant.	• Its interface is generally focus on mobile based and tablet based users
planet DDS	• Its customer service is excellent • Easy to navigate even with zero knowledge of the product	• Almost every thing requires an extra button to push and takes longer than the other	• Physical and virtual security layers	• Imaging and charting qualities needs to improve as compared to others

User Persona

Persona 1

Jenna Williamson

"Patient interaction is the best part of my job; the second closest part is keeping the schedule full"

Age	25
Location	London
Profile	Doctor
Status	Single
Work	Dentist

Backstory

Jenna Williamson is a young dentist in London. Recently, she started her practice in town. Unlike other mature practices with many trained staff sharing job responsibilities. Besides operating dental procedures, she needs to make decisions for her practice and also works on some other pieces of stuff like explaining financing obligations and treatment costs to patients. As a startup, her practice has to stay connected to insurance to stay competitive. She is getting tired of the paperwork gradually.

Needs

- A dentistry management software that could increase paperwork efficiency.
- A financing product that could help her to communicate cost payments plans with patients.
- Knowing the position of the practice in the market and improving its competitiveness.

Pain Points

- Spending 15+ hours on paperwork on average every week.
- Don't know how to get good reviews and improve the clinic.
- Don't know how to inform the patients about the payment and get them to pay.

Empathy Map

SAYS

- Increase the number of patients/appointments
- Get good reviews from patients
- Get paid the maximum amount and on time for each procedure.

THINKS

- I wish there was something that would make my job easier.
- I wish there was an easier way to manage patients/appointments.

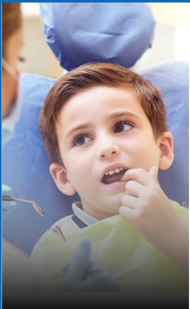
DOES

- Update the database of patients and other dentists to do job.
- Update and remind patients about the timeline and upcoming schedule.
- Keep track of payments and finance.

FEELS

- To give quality service to patients.
- To have good management platform.
- To increase the output.

Persona 2



Steve Hagerman

"I'm afraid of going to the dentist because I don't want it to hurt"

Age	4
Location	New York
Profile	Patient
Status	Child
Gender	Male

Backstory

Steve is 4 years old and has to go to the dentist because he has a toothache after eating candy. He is anxious about going because he is scared of injections, and he cries and screams whenever he gets one. Because of the toothache he can't go to school or play outside like his siblings and friends.

Needs

- Clear expectations
- To feel brave and safe
- Good dental health
- Needs an anxiety-free dental appointment

Pain Points

- Feels lied to
- Doesn't know what's going to happen at the dentist
- Avoids the dental clinic because of needles
- Doesn't feel safe but needs his toothache cured

Empathy Map

SAYS

- Doesn't want to visit the clinic
- Doesn't want the injection
- Needs the toothache cured as soon as possible

THINKS

- I wish I could be brave
- I wish I didn't get the toothache by eating so many chocolates and ice-cream
- I wish to get rewards after the dentist

DOES

- Cries and screams when he's scared
- Asks questions about injections
- Gets scared at the dentist

FEELS

- To feel comfortable about visiting dentists
- To be fully aware and informed of what to expect
- To have good, strong teeth

Test

"The final solution to answer the questions"

Empathize, define, and ideate have been carried out. So the next step is to make a prototype out of the mockup design I created. The prototyping stage was my chance to put everything I had learned so far to work.

In the last phase, I shared the prototype with my team and asked what could be improved and how it looked and felt to use. Two changes came out of it: a more compact appointments table that keeps only the useful information, and a visual tooth chart that makes treatment easier to explain to patients.
